Remzi Çiçek	21526858

Technologies

The back end of the project is developed with java.

MySQL is used in the database section.

Spring Boot is used as frameworks.

Hibernate and Spring Data JPA are used to connect to the database.

The security side of our project is created with Spring Security.

RestFul is used for state transfers in the HTTP protocol in the project.

Template is used on the front side and necessary improvements are made on the template using Thymeleaf, HTML, CSS. Also, Javascript is used if necessary.
